

mbmusic PRO Module Effect Controller.

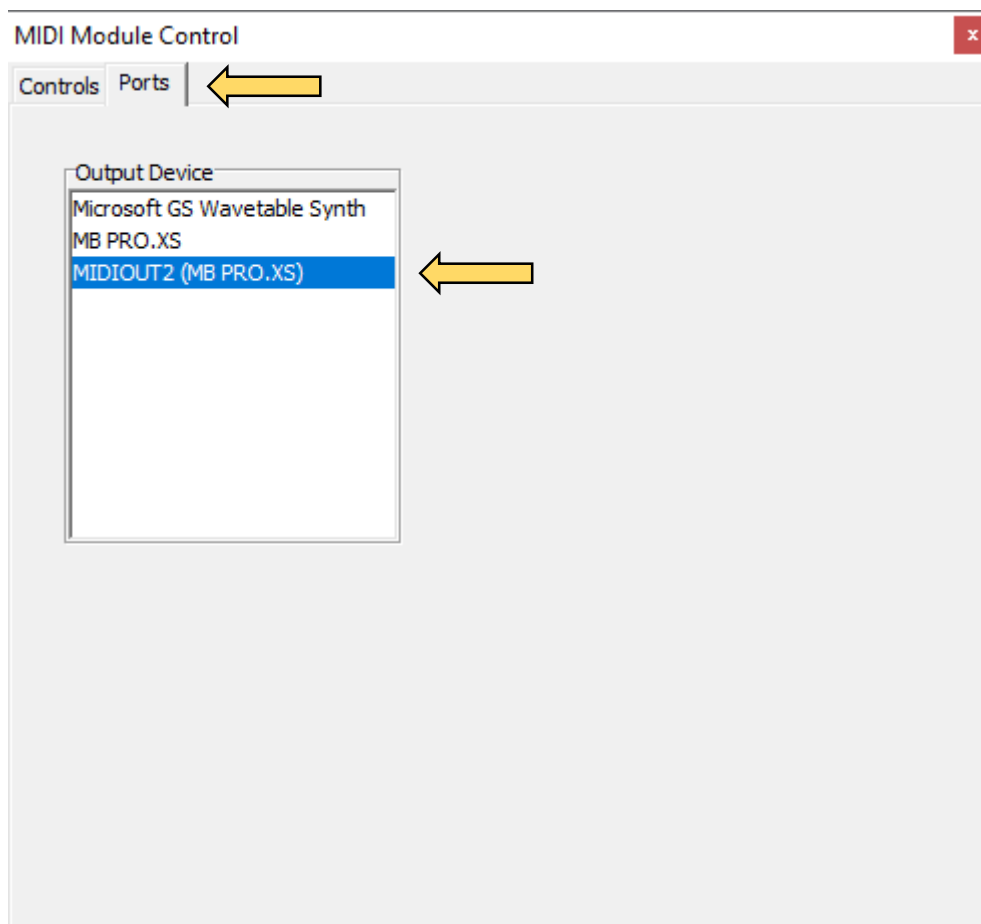

Midi Module Control

You have the option of changing the master equalizer, reverb, multi-effect and 3D simulator for the sound module.

For ports, select: MIDIOUT 2 (MB PRO.XS)

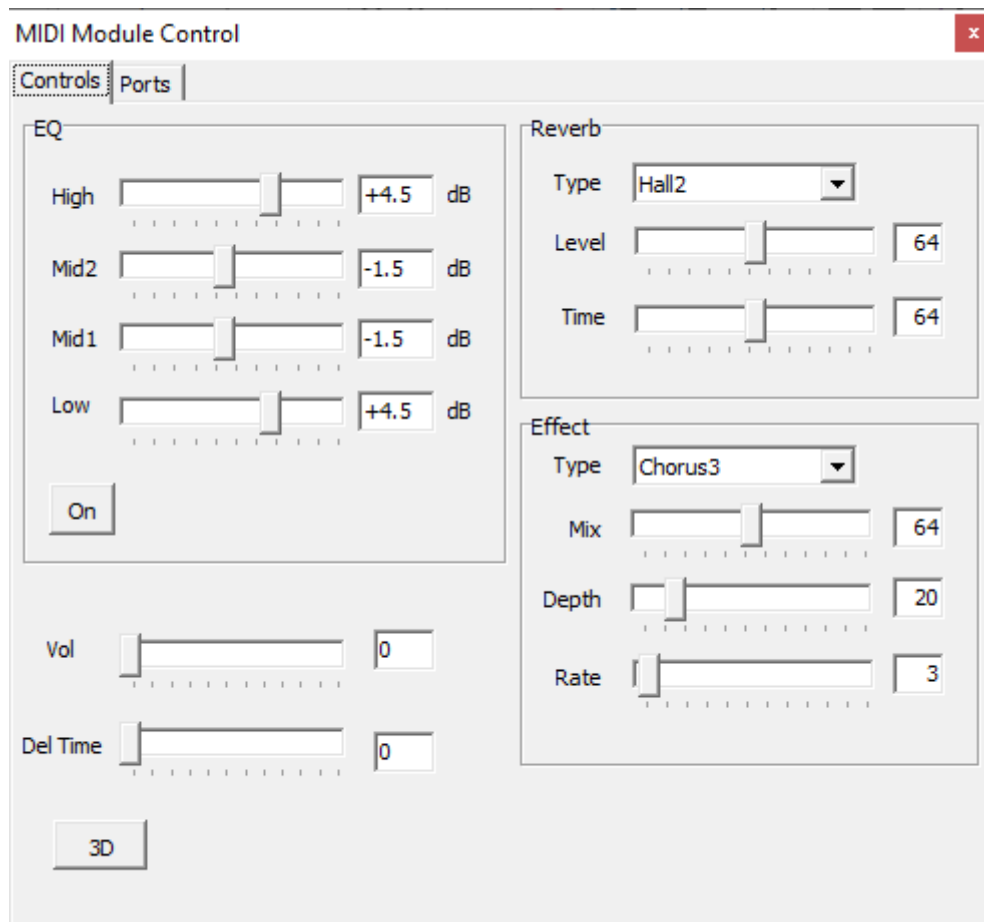

MIDIOUT 1 is compatible with a player or software program such as Midiland Optimizer

Cubase, or Rapsoft Miditool EX. This means that the (2nd) second midi port of the sound module is available for making global changes to the effects.

You can switch the desired effects on/off and change the parameters and change the settings.

NOTE: the values cannot be saved; they remain active as long as the sound module is switched on. If the module is switched off, the module is reset to the factory settings.

More information will soon be available on our homepage at: www.mbmusic-pro.de; or on Youtube, Facebook, Intergram.
